AMENDMENTS TO THE SPECIFICATION

-Please amend the paragraph beginning on page 2, line 8 (i.e., after the title: <u>SUMMARY OF INVENTION</u>) as follows:

L/25/07

Now in accordance with the present invention, a method is provided for phase noise suppression in a receiver section of an OFDM based WLAN operating in accordance with IEEE standard 802.11(a). The null subcarrier set S_N from Fast Fourier Transform (FFT) is used to estimate ICI (Inter-carrier interference) plus noise energy, and the pilot subcarrier set S_P from Fast Fourier Transform is used to estimate CPE (Common Phase Error). These estimates are applied to the Minimum Mean Square Error (MMSE) equalization of the data subcarrier set S_P S_D. Preferably, the said pilot earrier subcarrier S_P set is taken from MMSE (minimum mean squared equalization) equalization and data detection block of the circuitry as a first decision and fed back in a loop to the CPE estimater, to further improve the CPE estimate.
